

CEM-24 Series

Thermostat

Application

The CEM series is a telephone communication thermostat used in commercial, residential or industrial buildings. Excellent for access to remote facilities via the telephone to check and adjust operating parameters. Also for people with vacation homes that want to check their home or condominium to make adjustments before they arrive. Additional telephone line not required, works with answering machine. Thermostat and modem in same enclosure.

General Description

- ◆ **Surface Mount Programmable 5/1/1 Thermostat, 24 VAC or Non-Programmable**
